

HOW TO USE YOUR SUBSCRIPT

On the previous two pages you'll have seen our brand-new subscription offer from Dynamite Baits. Now Dynamite's Rob Wootton tells you how to get the most from all that great bait.

The two Dynamite Bait packs we've put together for readers of Total Coarse Fishing offer something for every coarse angler. We've been careful to select products that you can use throughout the year for every species from carp to roach. Here I'll show you the best way of mixing the groundbaits and I'll reveal a couple of my favourite mixes.

SILVER X RANGE

Silver X is a range of groundbaits and liquids designed for fisheries in the UK by some of the country's leading match anglers. They're all really easy to mix and here are a couple of blends that I've used with great success...

SILVER X BREAM AND SILVER X ROACH

Mixed 50/50, this my favourite all-round groundbait on natural venues for both float and feeder. I'll use this groundbait on any venue where pellets aren't used.

SILVER X ROACH AND FRENZIED HEMPSEED SUPER MATCH

This is a brilliant blend for roach. The Frenzied Hempseed adds masses of flavour and a dark colour over which fish will feed with confidence.

SILVER X ROACH LIQUID ATTRACTOR

This flavoured liquid adds extra pulling power to a groundbait. It's also a fantastic way to 'deaden' a mix, making it less active, which is a useful play for good-quality fish.

THE SOURCE GROUNDBAIT AND LIQUID

This new groundbait has been developed for carp and can be used for both match-style and specimen carp fishing. It's great in an open-ended feeder or moulded around a Method feeder, while a few balls introduced at the start of a session will provide the perfect kick-start. It also works brilliantly as part of a spod mix.

ION GIFT

THE SOURCE PELLETS

Subscribers who choose The Source range will get two bags of pellets – 4mm and 6mm. They're great for carp of all sizes, and can be used in a spod, catapulted or cupped into your swim.

Before I use them, I always wet them to ensure every one sinks easily. It's really easy to do...

HOW TO PREPARE SOURCE PELLETS

01 Pour your pellets into water in your bait bowl or bucket.

02 Now pour the water plus pellets through a maggot riddle.

03 Nicely wet and ready for feeding.

HOW TO MIX THE SOURCE

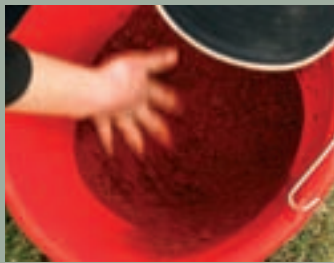

01 Pour a good squirt of The Source liquid into a water-filled container.

02 Pour the bag of dry groundbait into your mixing bowl or bucket.

03 Pour the water-and-liquid mix into the groundbait.

04 Mix the groundbait vigorously so that every particle becomes damp.

05 Now leave for 20 minutes and add more water to make the groundbait damper still.

06 Pass the mixed groundbait through a groundbait riddle into another bowl.

07 The finished groundbait should squeeze easily into a ball.
